certified providers

+25

years of **stem cell**
research experience

Modern healthcare is shifting

As a leader in proactive "whole health" care, you understand that optimizing today's biomarkers is only the first step. Forever Labs allows you to offer the next level, so your patients can access therapies available today and on the way.

Forever Labs is the first ISO-certified stem cell biobank in the U.S., founded by biomedical research scientists and medical doctors. We deliver clinical infrastructure for you to help your patients to bank their youngest possible stem cells today, creating a definitive biological resource for the regenerative therapies of tomorrow.

Why partner with Forever Labs

Science, not hype

We provide a fully vetted, scientifically rigorous platform for our network of high-caliber, board-certified physicians.

Scientific foundation

Founded in 2015 by a team with 25+ years of combined stem cell research experience.

Certified U.S. facilities

Our primary lab in Ann Arbor, Michigan, is ISO-certified. A second cGMP-compliant lab opens Spring 2026 in Jupiter, Florida.

Patented Technology

We hold two U.S. patents for comfortable cell extraction and dynamic cell expansion, supporting optimized viability and patient comfort.

“We are entering an inflection point in medicine where we will change our focus from disease-based care to preventive-based care by identifying the early signs of disease and aging and harnessing the human body’s ability to heal itself.

Without a doubt, stem cells will be an integral part of these advanced treatment plans. Our work at Forever Labs has positioned us as a trusted leader in this industry.”

Dr. Tom Nabity

Chief Medical Officer, Michigan
Center for Regenerative Medicine

Getting started with Forever Labs is easy

01

Apply

Submit your application to join the Forever Labs network. A team member will reach out to schedule an introductory call.

If you're already in touch with a team member, let them know you'd like to proceed with your application.

02

Onboard

Our team will help you get set up on the Forever Labs platform so you can start referring patients to store and expand their stem cells.

We'll also bring you members interested in storing their stem cells.

03

Collect

Schedule collection procedures at your clinic when it works best for patients.

We provide collection kits and handle the logistics for stem cell samples from bone marrow aspirations and adipose tissue collection.

Transparent value for providers and members

We maintain a simple, flat-fee structure to ensure clarity for your patients and predictable revenue for your practice.

We believe the most successful clinical outcomes are grounded in trust. As a physician leading the shift toward proactive medicine, your expertise is the most critical component of our network.

Regenerative medicine is transforming how we think about aging and recovery.

Through our collaboration with Forever Labs, we're proud to offer patients a forward-thinking way to preserve their healthiest cells for the future of medicine.
